

# GLASS SOFT A1

**Soft surface - Strong performance**

GLASS SOFT A1 is a lightly coated glass fabric with an exceptionally fluffy surface. The special weave construction, combined with a particularly soft yarn, gives the fabric a high-quality look and a pleasant feel. At the same time, the material is crease-resistant—a decisive advantage for demanding applications.

These properties open up a wide range of possible applications, including in the furniture industry and in modern interior design. The acoustic function of fabrics is becoming increasingly important, particularly in interior design. Thanks to its special structure, GLASS SOFT A1 has a sound-absorbing effect and significantly reduces reverberation in rooms. This noticeably improves speech intelligibility and creates optimal conditions for concentrated work and a pleasant feel-good atmosphere.

In addition to its functional and aesthetic advantages, GLASS SOFT A1 meets the highest fire safety requirements. The fabric is classified as building material class A1 according to EU standard EN 13501-1. It is therefore non-combustible and does not produce any smoke gases that are hazardous to health in the event of a fire. This makes GLASS SOFT A1 suitable for use in escape routes and other safety-relevant areas.

With a usable width of 320 cm, the fabric offers a wide range of design options for seamless work.

## **Areas of application are:**

Textile construction, public buildings, building materials, acoustic partitions, trade fair booth and theater construction, interior design, interior decoration, light ceilings, sound absorbers, upholstery fabric, industrial use, sound sails
